2.1 YAML additions for themes

Some themes need some additional YAML information to work.

2.1.1 bg-image

Needs info on the titlepage geometry so the title doesn't overlap the background image. Also you need to supply the background image and where to put it (UL, upperleft; UR, upperright; BL, bottomleft; BR, bottomright). Note, there are placeholders in the extension, but when you put your own image in, you'll need to add the YAML information.

```
format:
  titlepage-pdf:
    titlepage: bg-image
    titlepage-geometry:
      - top=3in
      - bottom=1in
      - right=1in
      - left=1in
    titlepage-image: "img/corner-bg.png"
    titlepage-image-location: "UL"
    titlepage-image-size: 0.5
```

2.1.2 great-wave

Great wave cover page theme creates a cover page with a background image that fills the width of the page at the bottom with a color above. You need to specify the image and the upper color (unless you want to use the default Great Wave off Kanagawa image).

```
coverpage-image: "img/TheGreatWaveoffKanagawa.jpeg"
coverpage-color: "F6D5A8"
```

2.2 Document classes

The document class changes the look of your document. For the book document classes, you will need to pass in

```
number-sections: true
```

in your YAML because Quarto sets `number-sections: false` by default and that will mess up all your equation, figure and table numbers. It simple will not number them correctly at all.

For book document classes (like `scrbook`), if you want chapters to be allowed to start on even or odd pages and the left and right margins on even and odd pages to be the same, use

```
classoption: ["oneside", "open=any"]
```

2.3 Static versus dynamic themes

`vline-static`, `thesis-static`, `multi-purpose-static`, `classic-lined-static` and `academic-static` use a title page that is defined in the `_extensions/titlepage` folder. You will need to edit the `_xyz-static_titlepage.tex` file.

The other themes use the YAML for the title page info and you do not need to edit the `...-titlepage.tex` files unless you want to customize the pages.

3.1 Supporting theory

Let X_1, X_2, \dots, X_n be a sequence of independent and identically distributed random variables with $E[X_i] = \mu$ and $\text{Var}[X_i] = \sigma^2 < \infty$, and let

$$S_n = \frac{X_1 + X_2 + \dots + X_n}{n} = \frac{1}{n} \sum_i^n X_i \quad (3.1)$$

denote their mean. Then as n approaches infinity, the random variables $\sqrt{n}(S_n - \mu)$ converge in distribution to a normal $\mathcal{N}(0, \sigma^2)$. Thus concludes the explanation about Equation 3.1.
